

PEDRO ARANZAZU M

FRONT-END DEVELOPER

 pedro.aranzazu.dev@outlook.es

 +57 (310) 6408798

 Envigado Col.

SUMMARY

I am a Frontend Developer with experience in **HTML**, **CSS**, **JavaScript**, and **React**. I am passionate about creating dynamic and functional web interfaces. Additionally, I stand out for my eagerness to learn, my ability to quickly adapt to new challenges, and my strong communication skills. I am committed to continuous improvement and teamwork, always seeking efficient solutions.

EDUCATION

Universidad de Envigado

Bachelor's Degree in International Business Administration

2019-2024

Diplomas and Certifications

- Web Development Certificate (**HTML** and **CSS**) – Coderhouse
- **JavaScript** Certificate – Coderhouse
- **React.js** Certificate – Coderhouse
- Diploma in Digital Marketing (Strategic Skills for Finance and Projects) – IUE

SKILLS

- Skills in **HTML**, **CSS**, **JavaScript**
- Experience with **Bootstrap** and **Tailwind**
- Experience with **React.js**
- Knowledge of **Git**
- Experience with **REST APIs**

LANGUAGES

- Español (NATIVO)
- Inglés - B2

EXPERIENCE

Website Development

February - Present

In my experience as a web developer, I have worked on a variety of projects, each with its own focus and set of technologies.

One of my first projects was creating a website for a music academy, where I used **HTML** and **CSS** to build a clean and structured interface. The goal was to develop a simple and accessible platform where users could find information about courses, the teaching staff, and class schedules. I ensured the site was responsive, adapting well to mobile devices and providing a clear and functional user experience. Later, I developed my second web project for a liquor store, using **JavaScript** to implement an online shop with an interactive shopping cart system. This project focused on enhancing the user experience by providing smooth navigation and real-time product updates.

Finally, I worked on developing an online eyewear store using **React.js**. I built an e-commerce site with a dynamic catalog that allowed users to search, filter, and efficiently explore products. Additionally, I integrated **Firebase** to manage the database.

Beyond these projects, I have worked on other personal developments, focusing on consuming **REST APIs** using both **Fetch** and **Axios** to handle dynamic data within frontend applications. In these projects, I have explored external **API** integration and optimized requests to improve performance and user experience. I also use **Git** and **GitHub** for version control and collaboration, ensuring a structured and efficient workflow.

Currently, I continue expanding my knowledge, focusing on **TypeScript**, **Storybook**, and **React Native**.

PORTAFOLIO

In the following links, you can view the projects I mentioned earlier. I've also included a link to my GitHub with all the projects I have worked on.
